

Dr. Paul Ewart is a visiting academic and research leader for the Centre for Engineering and Industrial Design (CEID) at the Waikato Institute of Technology (Wintec) in Hamilton New Zealand (NZ). He has a PhD (mat. proc.) from the University of Waikato, Hamilton, NZ and is a Fulbright fellow.

His research interests encompass computer aided engineering, CAD and product development for commercialisation. His focus is on equipment design (research, manufacture and sports equipment), development and modification, with his main knowledge areas being materials, process and testing. Paul has specific expertise with powder metallurgy of titanium metals and works closely with industry and technology companies to enable new technologies and commercially viable products to pre-production.

“I have been fortunate with research opportunities in England, Germany and the USA. And now with the support of Professor Capek and the Erasmus+ programme have been able to collaborate here at Liberec University of Technology.

I have had a wonderful experience here in Liberec and thank the people who have made me so welcome. I look forward to returning here to continue our work soon. “
