TRAPPIST-1 System

Atmosphere of Venus

Previous study ¹ on S_2O_2

- Identified two cis-OSSO and trans-OSSO isomers
- Calculated the vertical excitations

[1] B. N. Frandsen, P. O. Wennberg, and H. G. Kjaergaard, “Identification of OSSO as a near-UV absorber in the Venusian atmosphere.”, Geophysical Research Letters **11**, 146–155 (2016).

Spectra simulation²

- Trajectory surface hopping technique

Simulation parameters

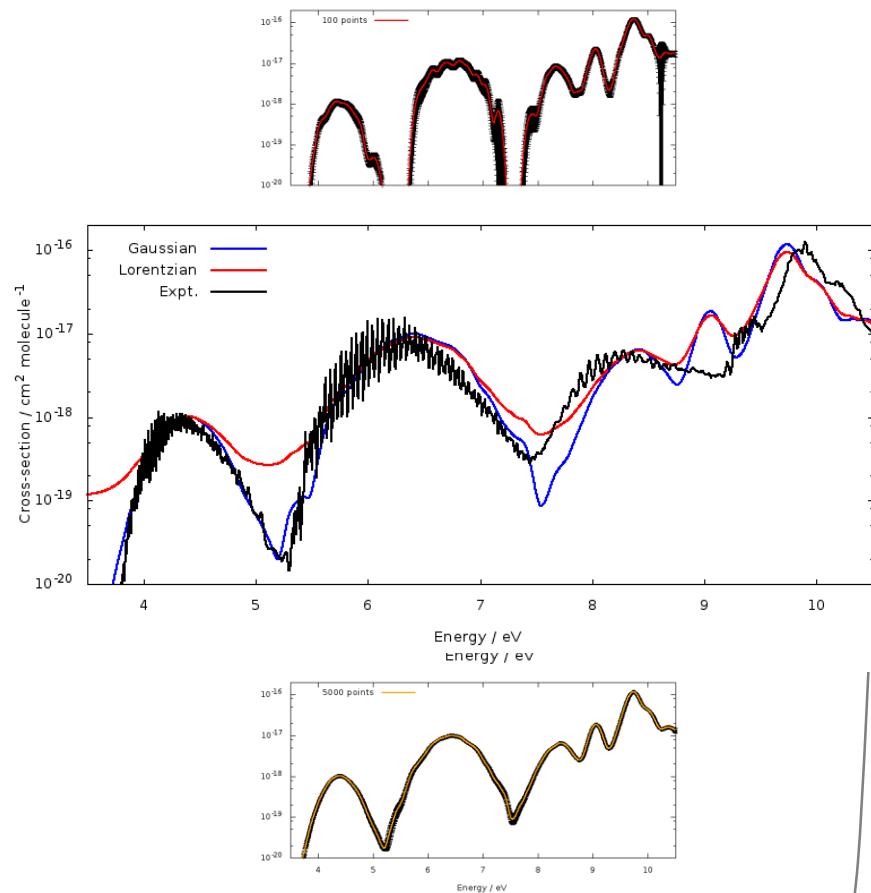

- Newton-X parameters
- Electronic structure parameters

[2] S. Farahani, B. N. Frandsen, H. G. Kjaergaard, and J. R. Lane, "Simulated Electronic Absorption Spectra of Sulfur-Containing Molecules Present in Earth's Atmosphere." Accepted in The Journal of Physical Chemistry A (2019).

SO_2

Newton-X parameters

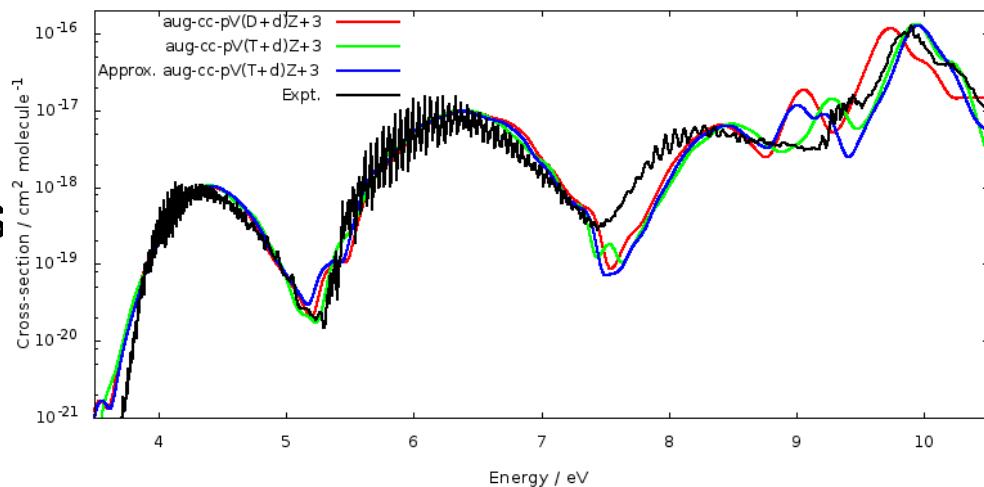

- Distribution
- Number of points
- Band shape
- Phenomenological broadening of the spectrum (δ)

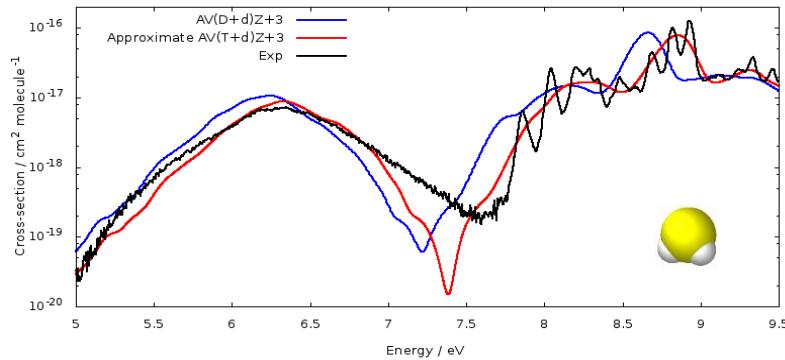

Electronic structure parameters

- *Ab initio* method
- Basis set
- Number of excited states

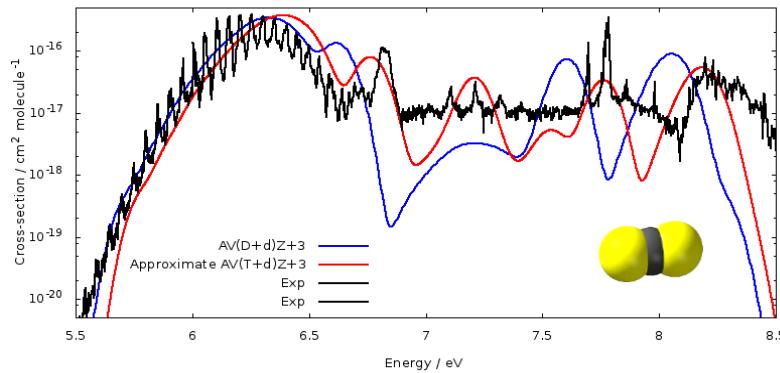

Other benchmarking S-molecules

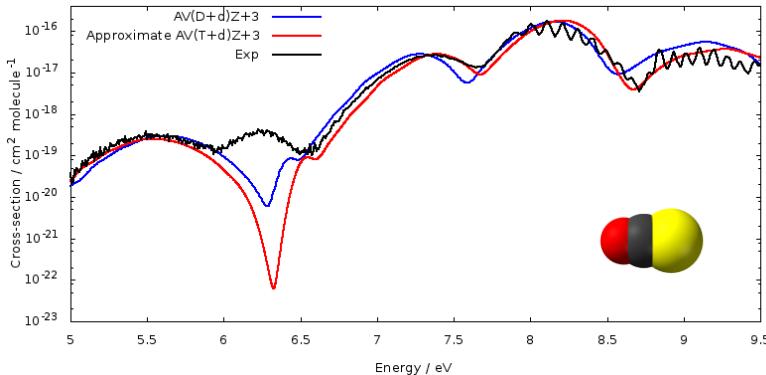

H_2S

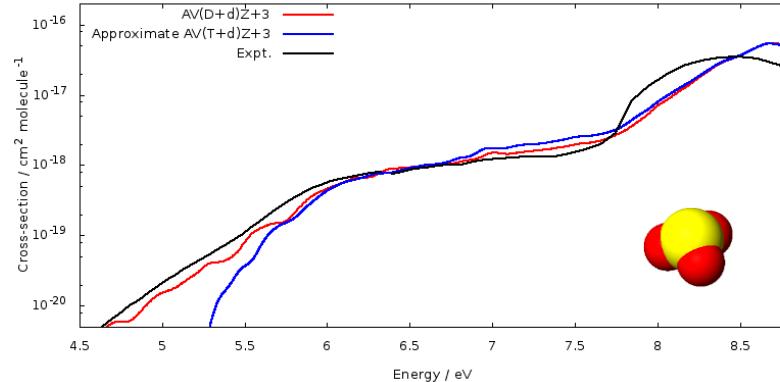

CS_2

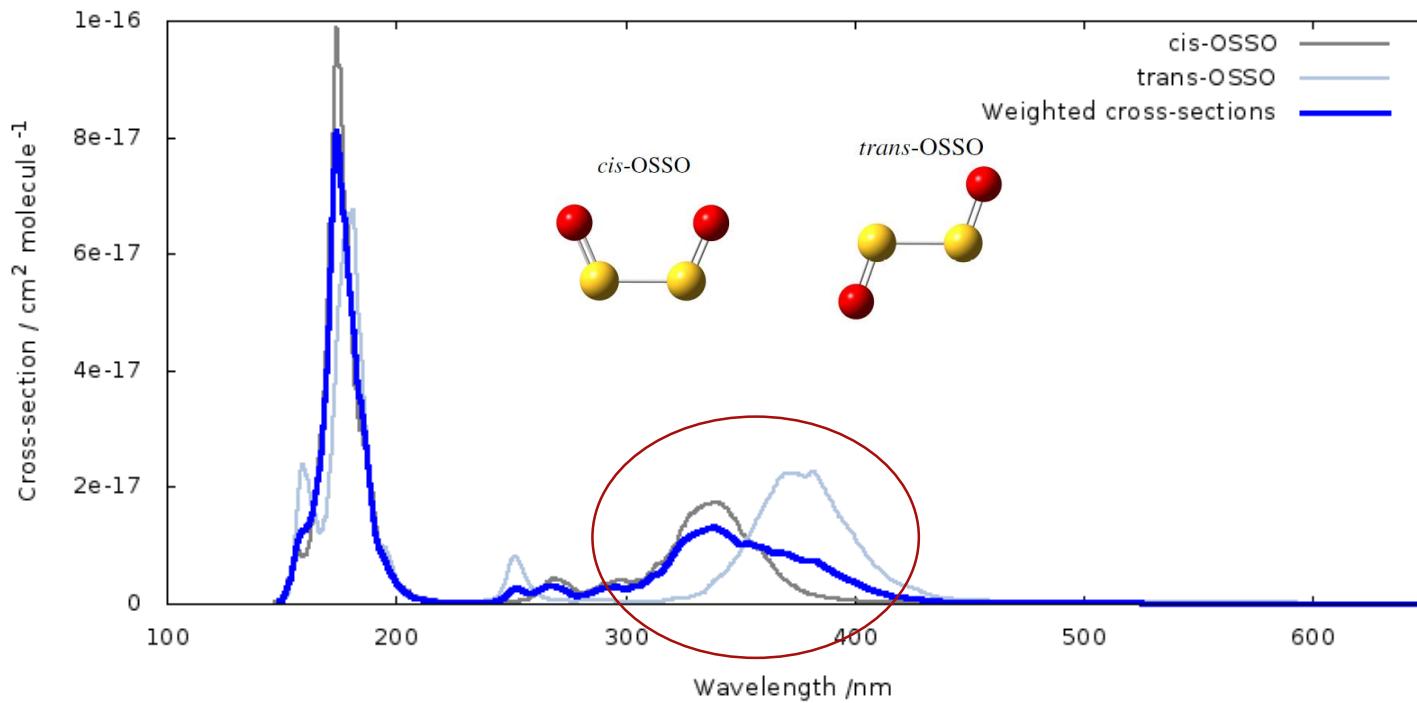

OCS

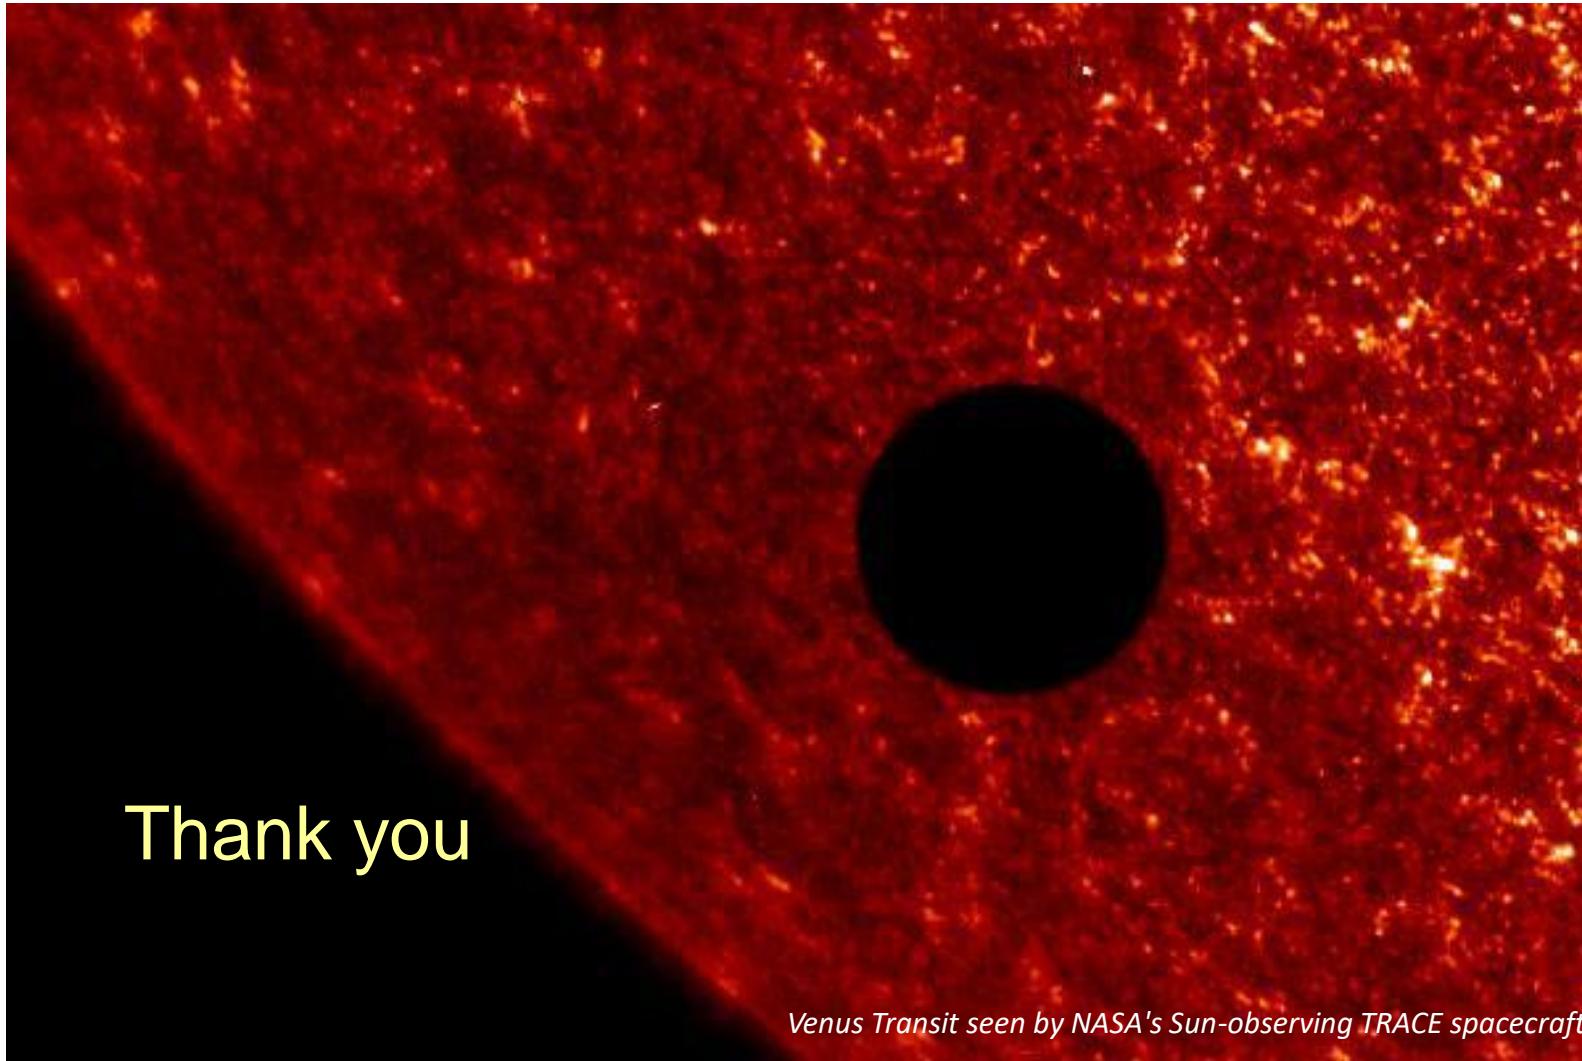

SO_3

Weighted simulated spectra

Thank you
